Wall/floor

Rack/floor/wall Mounting Kits for XUPs/UPs, XINv, and ATs Series

All of TSi's products can be placed virtually anywhere that fits your space considerations. This includes desktop and floor mount options. If a rackmount configuration is what you require, TSi's XINv, INv, ATs, XUPs and most UPs systems are designed to accommodate most standard component rack/cabinet enclosures.

Key benefits

With one of these simple rack mount kit options, you can place your rack-mountable UPs (uninterruptible power system), XINv/INv (inverter) ARM (automatic redundancy module), or ATs (automatic transfer switch) in either a 19", 23", or 24" rack and facilitate the space requirements of your systems, not the UPS or transfer switch.

Shown mounted inside a standard telco-style 19" wide, 40" tall rack, are:

- An ARM-1000FAA automatic redundancy module (automatic transfer switch), using an MK-5019F Center-mounting kit.
- A TSi Power UPs-10000, and two EXT-8000 battery extension units, using MK-8019F Center-mounting kits.

TSi offers a range of different brackets allowing you to mount our products on the rack of your choice. We can help you to choose the most suitable set for your specific product and rack size. Also, please see the back of this page for a table of standard kits.

A TSi UPS-7200 & EXT-5000 battery extension unit shown mounted inside a 19" wide cabinet using an MK-5019A (Front rack-mount kit).

A TSi UPS-16000 and EXT-8000 Battery Extension Unit shown mounted inside a 19" wide cabinet using an MK-8019A & MK-8019B (Front and Rear rack-mount kits).
